HOPE & SOCIAL

An eight (8) Piece Band. Drums, Bass, 2 Guitars, Keys, Brass. With 5 vocalists.

P.A. SYSTEM.

A three or four way PA System, able to produce full range (20Hz to 20 KHz) sound throughout the venue. The system must be capable of producing and sustaining 110db at mix position.

The EQ **MUST** be accessible at the front of house desk position, **NOT** on stage with the monitor desk or amps.

If there are any noise restrictions please let us know prior to the event.

H&S will be touring with a Midas M32, Cat5, stagebox and mic and DI package.

We will require stands (6x long boom, 1x short boom)
Cables to stage box, and house system.
Output from our desk cannot be routed through another desk, access directly to Left and Right (subs / fills) is essential.

MONITORS

Each monitor should be able to produce full range of sound. No rattles buzzes or hums - plastic speakers turned on their side are not acceptable.

We require as is shown on the stage plan - a **7** way monitor mix with **8** monitors all the same spec. If this is not possible then you must let us know prior to the show. A monitor system can be hired in but at no cost to the artist.

Monitors should be positioned as to stage plan. Preferably with a sub for the drummers monitor. The stage layout can not be changed by anyone for any reason. Unless with prior arrangement.

Only if the Monitors are to be handled on stage, by a monitor engineer

The monitors should be mixed by a very competent sound engineer, who is happy to do their job. All members of the band know exactly what they require in their own monitors. Everyone is fussy but no one is difficult to please.
There is no point in doing a monitor list as it will no doubt change each performance.
